

## Saving Clips in iMovie '09

### Backing Up Projects

- To back up unedited footage, in the **Event Library**, drag the event from the Macintosh HD list to the Temporary Save Folder or a storage device. Keep in mind that uncompressed video files are very large. Backing up your project in this way will be time consuming and require a large amount of memory. For more information on this see Using iMovie ([link](#)).

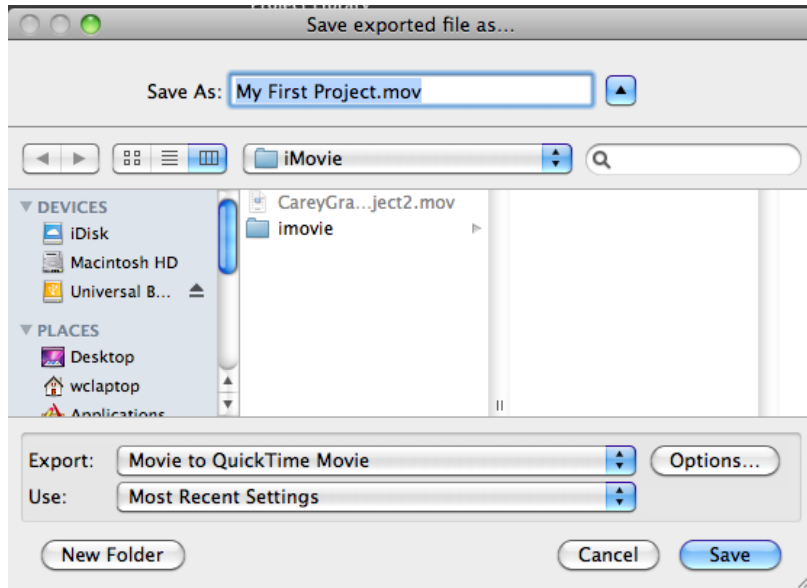

- To back up your edited, uncompressed project, click on the **Project Library** icon in the top left corner of the project box. Drag the icon and thumbnails of the project from its location under Macintosh HD down to the icon for your storage device and drop it. In the window that pops up, select **Copy project and events**. The project will save to your storage device.

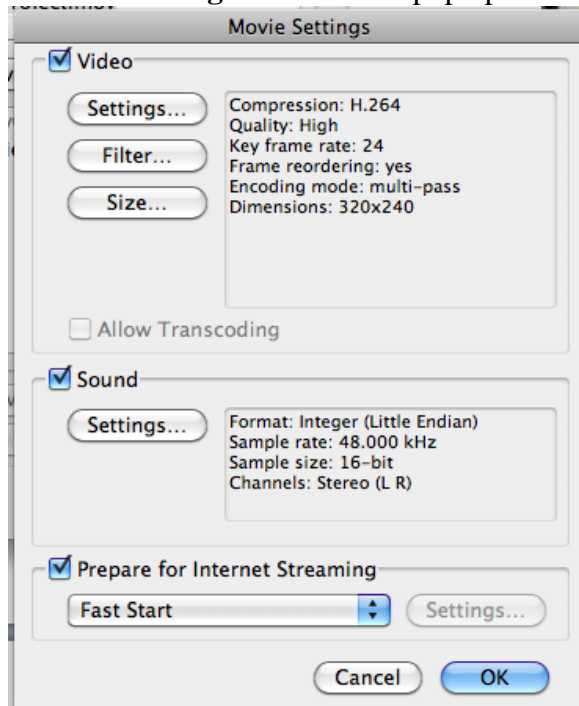

**Note:** If you select Copy project instead of Copy project and events, the footage in your project will not be saved.

### Saving Your Project as a QuickTime Movie

- Go to **Share → Export using QuickTime**.
- A **Save exported file as...** dialog box will pop up.

3. Click on **Options**.
4. A **Movie Settings** window will pop up.

To create a 320 x 240 file (recommended):

- a. Click on **Size...**
- b. In the **Dimensions** drop down menu, select 320 x 240 QVGA.
- c. Click **OK**
5. If you want to save only the sound of a file, uncheck the box next to **Video**.
6. When you have made all of the changes you want, click **OK**.
7. Choose the location where you want to save your QuickTime movie and give it an appropriate name.
8. Click **Save**

9. Your movie will take a few minutes to export to QuickTime. The larger its size, the longer it will take.
